Engineering Engineers

Presentation Goal

2

scope 1

Carbon transformation can address industrial emissions by replacing fossil feedstocks with CO2 for chemicals, materials and fuels.

scope 3

We also address transportation emissions with power-to-liquids e-fuels that have up to 90% lower lifecycle emissions than conventional fuel.

accelerate to zero

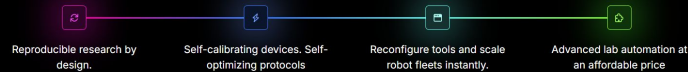

Eliminate emissions and fossil fuels from materials, chemicals and fuels linking in supply chains.

Built for Biologists by Biologists.

As biologists, we've seen it all. Expensive, bespoke automation that is not built for flexible research and discovery, or cheap and unreliable automation that you cannot trust when you need it the most. This is not a tradeoff that we think is fair for biologists to make.

Trilobio offers a new way forward: Advanced automation, zero integration work, simplified research design, excellent reliability, and an affordable price point. It might seem like a dream, but that's just because we built our dream lab automation platform for you.

Civic Education as a Bedrock for Olin's New Curriculum

Twelve and Trilobio, two prominent Olin startups

Olin Mission Statement

3

Olin College prepares students to become **exemplary engineering innovators** who recognize needs, design solutions, and engage in creative enterprises for the **good of the world**. Olin is dedicated to continual discovery and **development of effective learning** approaches and environments, and to co-developing educational transformation with collaborators around the globe.

What an Olin engineer *should* be

4

- Critically thinking
- Informed
- Compassionate
- Civically *engaged*
- Have engineering as a tool

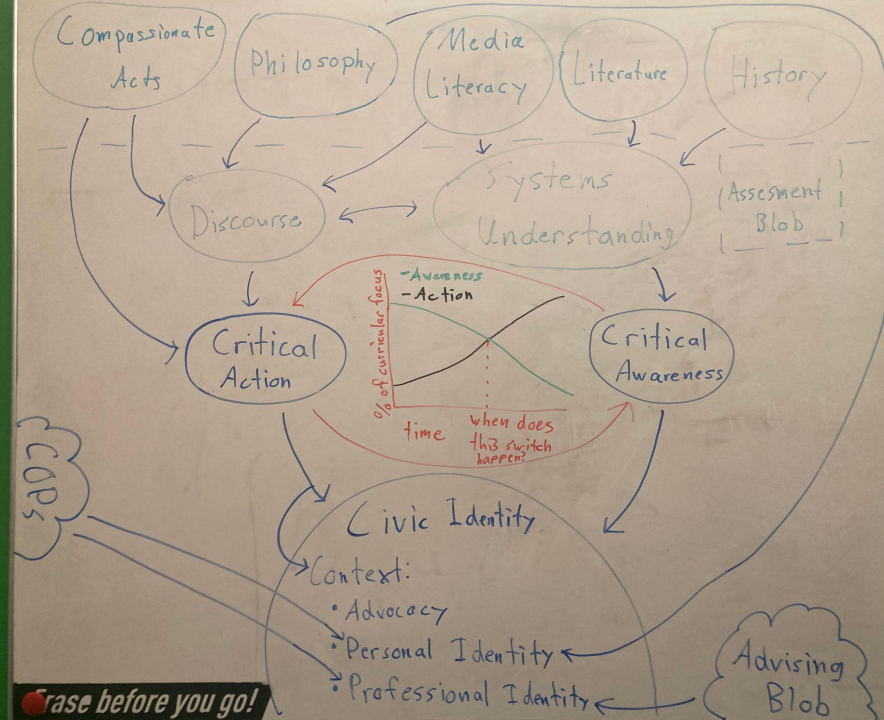

Curriculum Redesign Finally: How do we equip an Olin Engineer

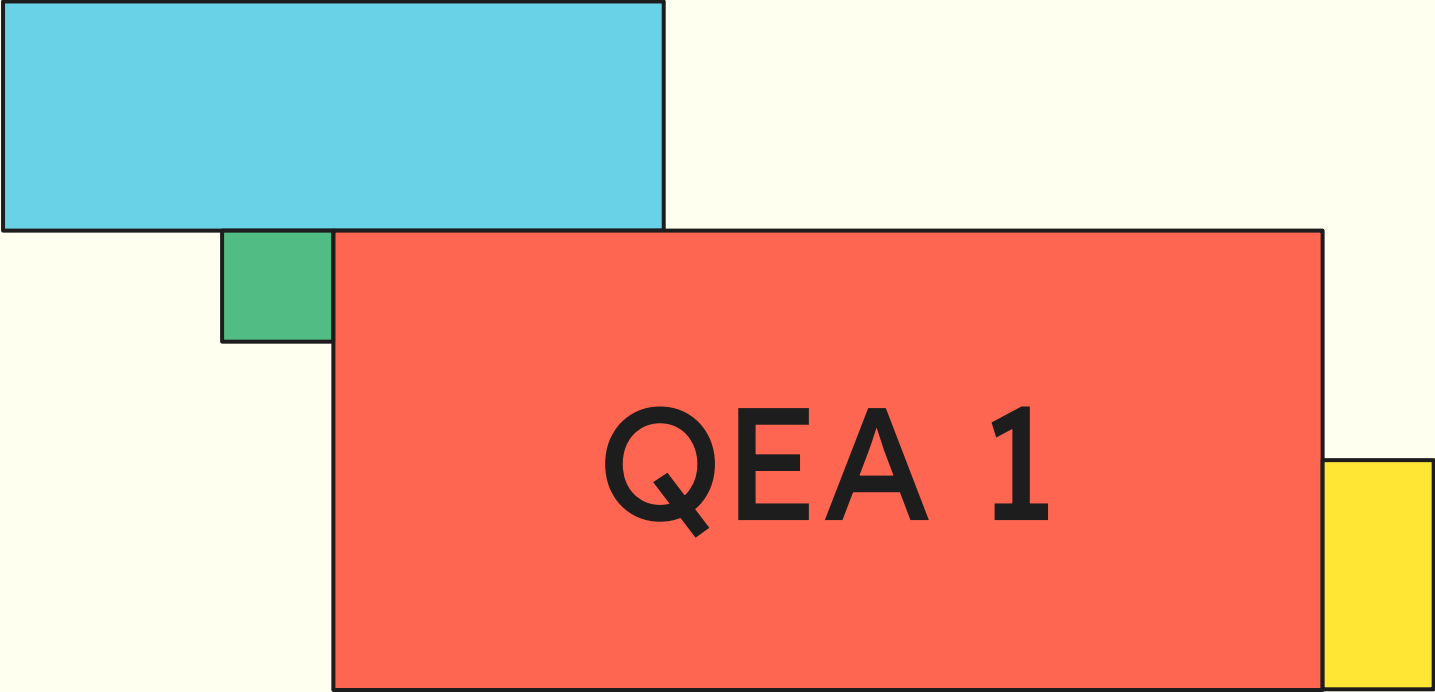

Civic Education as Olin's Bedrock

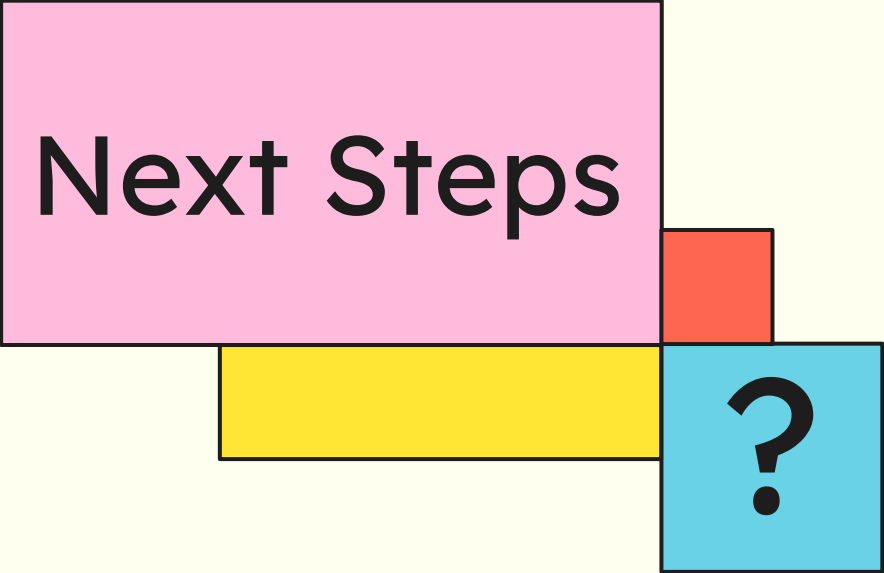

Competency Tree

QEA 1

Next Steps

The Status Quo

Basics

115 students

- Gender:
 - 35% women
 - 58% men
 - 4% another gender (i.e. genderqueer, nonbinary, agender)
- Legal Sex:
 - 40% women
 - 60% men

Student researchers expand access to early hearing loss detection with smart UI design

Three student researchers at Olin College worked this summer with faculty from Olin and Boston College to develop two reprogrammable user interface (UI) prototypes that support early detection of hearing loss in children - improving access to care around the world.
